

Activity 4: Container Herb Garden @Home

Let's make a portable herb garden. For this activity you will need a few empty containers, such as cans, milk cartons, yoghurt pots, jam jars, or even a tea cup, soil, and materials to make decorations and labels, such as tape, paper, card, ribbons, string etc. and seeds or plants.

Directions

- Look at the herb growers cheat sheet below. Decide if you want to grow and keep your herbs inside or outside and select the appropriate plants you wish to pot or grow.

- Next make sure the containers you decide to use are clean and there are no rough edges that can cause injury.
- Decorate your container and or make a tag that identifies the herb. See examples below.
- Now fill your container with soil.
- Add a few seeds to each container or plant your potted herb in the soil.
- Water the seeds or plant.
- Display your containers together on your windowsill or in your garden and watch them grow.
- How many Roman herbs do you have in your home already? What do you use them for?
